

NEWSLETTER n°04 April 2010

Back from the international exhibition held in Friedrichshafen, the whole staff Magni Gyro is now back to his daily job life, fully supported by a renewed energy released by this extraordinary and successful event.

Curious, experts, customers and prospects have had the chance to admire the three models there exhibited: the M16 Tandem Trainer in the latest version 2010, the M22 Voyager and the M24 Orion.

The M16 2010 maintains the features of its predecessor, offering a major in-flight comfort to pilot and passenger.

The new baggage compartments, two in the front and one in the back of the cabin, provide an additional space for stocking personal items, tools or small luggage.

This permits medium-long transfers or, why not, gives the chance to fly away for the weekend with your partner, without asking her to renounce at her beauty-case!

The interior of the gyro is equipped with a bottle and a penholder very well finished, preventing them to come out while on flight.

Other new features are the new carbon spinner, the new cooling system with dual thermostatic valve and the certified oil line that improves noise reduction by 2 decibels.
